1 DETERMINE YOUR FIREPLACE TYPE

There are four basic types of fireplaces - Raised Firebox, Floating Firebox, Flush and Raised Hearth. Select your fireplace type.

- Raised Firebox
- Floating Firebox
- Flush
- Raised Hearth

2 MEASURE THE DIMENSIONS OF YOUR FIREPLACE OPENING

HEIGHT
Take three measurements (left, center and right) and record the smallest of the three. Measure from the top of the firebox or the top of the lintel (whichever is highest) to the bottom of the fireplace face.

- Outer Height: [ ]
- Lintel Height: [ ]
- Arch Height: [ ]
- Back Height: [ ]

If the lintel is a different height than the fireplace face, also record the height to the lintel.

If your fireplace has an arched opening, also record the largest height measured.

WIDTH
Take three measurements (top, middle and bottom) and record the smallest of the three.

- Outer Width: [ ]
- Back Width: [ ]
Measuring Your Fireplace

DEPTH & CLEARANCE

Depth: Measure from the front face of the fireplace to the back wall.

Clearance: Measure the distance from the top and each side of the firebox to any combustible materials.

3 CHECK FOR GAS AND ELECTRICAL LINES

How to check for existing gas and fire lines

Gas Valves are found in the fireplace or indicated by a valve key nearby. A fireplace with electric lines may have a visible outlet.

If you do not have gas or electric lines installed, you will need to have gas and/or electric lines installed before your fireplace insert.

We offer gas line installation and can recommend an electrician for electrical lines.

4 INSTALLATION

Are you interested in Home and Hearth installing your fireplace insert?

We make sure everything is done professionally and on time.

We include a chimney liner kit for $399.
